Matronics has maintained an unwavering commitment to the study of light with the corporate philosophy, "Trustworthiness and Creativity". But today, as we become ever more global, what is the true value that we have to offer? To answer this all-important question, in 2007, we enacted "Our Aspirations — Meeting needs; Exceeding expectations" as the new vision to create a new Matronics.

Our corporate philosophy of "Trustworthiness & Creativity" — simple words that are not easily put into practice. These important words represent unchanging principles to which we will always be dedicated.

ROHIT KUMAR NANDA

- Manufacturing of Fire Detection & Alarm Products
- Supply of IP and Analog based CCTV System
- Supply of Face detection based Access control
- Interiors & Renovation
- Supply of Raw / Finished material as per client specifications from Local / International market

Supply of Burglar Alarm System

The company was founded by Mr. Hariom Nanda in 1986. Prior to this Mr. Nanda had 14 years' experience in the industry and made the decision to use his skills and knowledge by founding Matronics India Pvt. Ltd. The company prides itself in giving a personal service and on its adaptability any given project and situation.

We are a small and friendly Security Company.

We have been installing Fire & Security equipment for 32 years.

We Provide Total Installation Solutions;

- Burglar Alarms - Protect home & offices from intruders with the option of a hard wired or wireless alarm system.
- Door Entry Systems – Additional security for residential segment. The System is IP based and whenever there is a visitor on your gate, you can view live video and even you can speak to him via your smartphone. The System is also capable of storing images of the visitors. You can also able to unlock / Lock your gate from anywhere in the world by using your Smartphone and Our Smart Device.
- Security Lighting Systems - Install lighting around the circumference of YOUR home and have your outside lights switch on, in the event of your alarm system going into alert mode.

Manufacturing of Fire Detection & Alarm Products

The Matronics Fire Alarm System detects and notifies early signs of fire even before it starts. It can help you reduce the risk of injury or death to employees and visitors as well as minimize damage to your property and disruption to your operations. Our 24-hour monitoring ensures your business is watched over at all times, even during non-business hours.

Our Advanced Conventional Fire Alarm System is designed as per The Fire Protection Authority (NFPA) and is ideal for small to medium sized offices, residential complexes and buildings. Matronics maintains the international quality of installation and after sales services. *Components of Fire Alarm System -*

- Main Control Panel - The Main Control Panel is the brain of the system. All the detectors are connected to the panel via wired loops. The looping is such that if any detectors fault out - the main panel will give a loop open or short signal. This enables one to know immediately when the Fire Alarm System is not functioning correctly. There are two type of Panel available - 2 Zone Panel and 4 Zone Panel.
- Conventional Smoke Detector - The smoke detector, is manufactured according to UL 268 Standards, it senses the presence of smoke and warns you before the fire starts. These are mounted on ceilings and sometimes even above the ceiling for specific requirements. When it detects smoke an alarm gets generated through the hooter.
- Conventional Heat Detector - The EN-54 approved conventional heat detector is designed with the state of the art combination of "Rate-of-Rise" and "Fixed-Temperature" operation ensures the best quality of heat detection in all environments.
- Manual Call Point - Ideally placed at entrance/exit points, this is a manual alarm. When some spots a fir or smoke, one can break the glass cover of the Manual Call Point and an alarm is generated.
- Hooter - The hooter is separately connected the control panel. When a detector goes into an alarm condition, it communicates with the main control panel, which in turn activates the hooter and a siren is generated.

Supply of IP and Analog based CCTV System

Matronics has started this division in 2008. Since then, Matronics have installed more than 4000 systems at various government institutes and private companies. Matronics also setup CMS (Central Monitoring System) for some banks partners.
